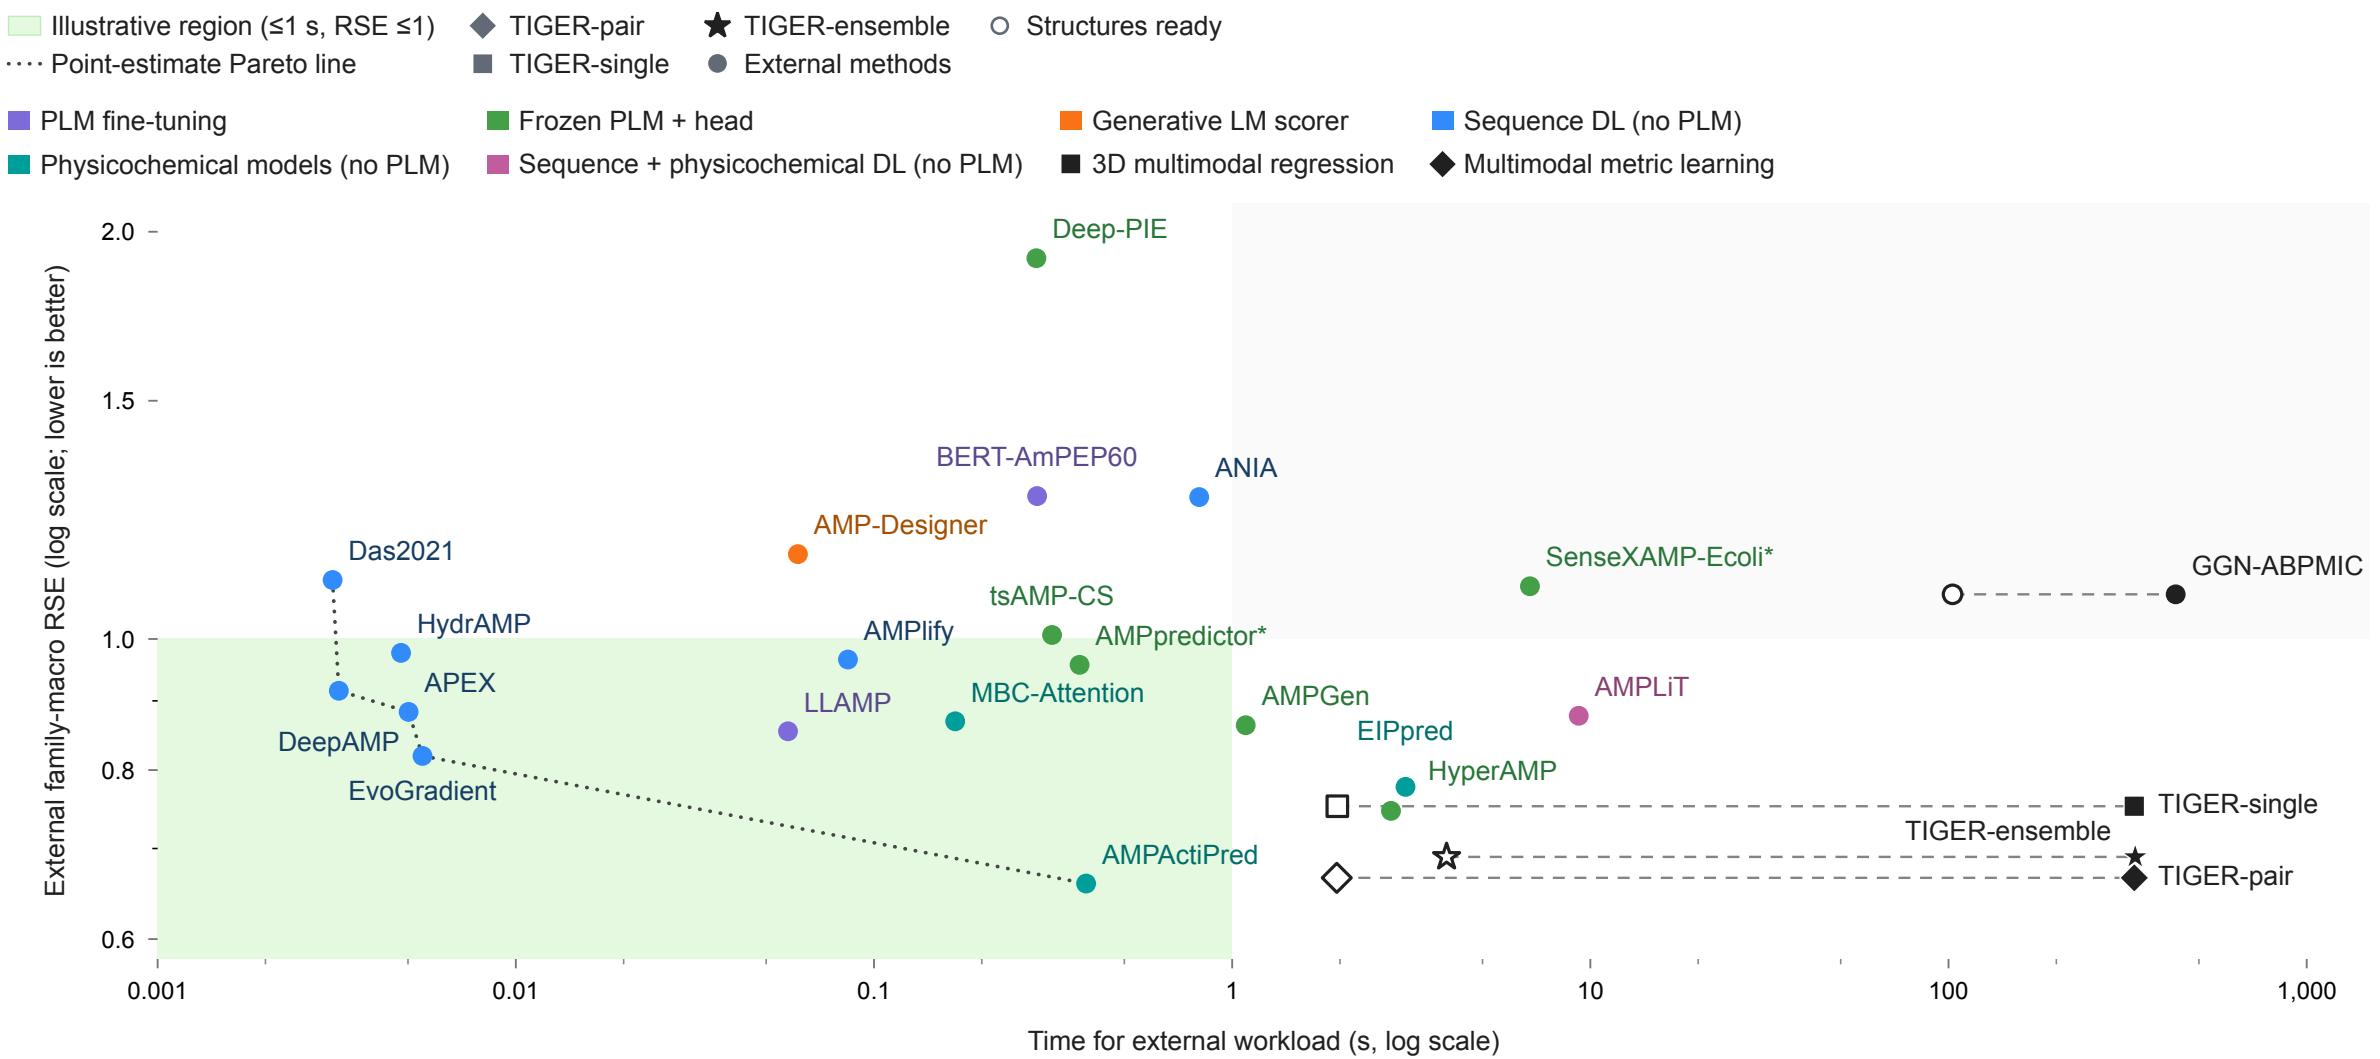
Prediction error vs. inference cost, including TIGER-ensemble

PCC-selected condition per backbone; fixed P11/S11 ensemble · ten-seed mean RSE · 208 peptides / 2,211 pairs

Seed-123 medians, 20 repeats: pair and ensemble retimed; other backbones retained



Backbone conditions selected by mean PCC; descriptive comparison; ensemble weights fixed at 0.5 / 0.5.

Filled: structure generation included; hollow: structures ready. The ensemble shares one structure library.

*SenseXAMP-Ecoli and AMPpredictor also use physicochemical inputs. Pareto segments are visual guides, not evaluated models.

Structure increment: 328.12 s for 208 peptides; Serial estimate from 30 measured peptides.
